DATA ANALYTICS

iFocus Systec uses its proficiency to provide qualitative and quantitative techniques which help to enhance comprehensive productivity, business profit, growth and technical dexterity.

Following are the common points that the customers usually face in the Data Analytics:

- ❑ The Data tends to be too big, heavy and sometimes too slow.
- ❑ Reliance on Hadoop, Impala, Hbase etc. for solving big Data problems.
- ❑ Being dependant on traditional relational DBs or In-Memory systems.
- ❑ The need of predictive modelling for Data scientists.
- ❑ The Fact that most Leading BIs are atleast 5 years old, hence failing to leverage advancements in technology.
- ❑ The dependency on data warehousing; cannot fit in Mobile.

iFocus Descriptive Big Data Analytics Solution:

- ❑ Digital Playgrounds
- ❑ Integrated Big Data Analytics
- ❑ API Gateway
- ❑ Deep Data Analysis
- ❑ No Data Warehousing
- ❑ Visual collaboration

BUSINESS SERVICES

Your Growth is our Target

SAP SERVICES

iFocus Systemc offers a broad range of SAP services to its clients, including business and IT consulting, and subject-matter expertise. It helps businesses utilize SAP solutions in an international platform, reduce the operational expenditure and maintain the product adaptability. With our technical competency, our SAP experts test and manoeuvre our System, Applications and Products in data Processing.

Our Approach

We, with the help of our existing technology partners in Pacecom, provide implementation, upgradation, enhancement, migration and application management services in the areas of Hi-tech, Healthcare, Manufacture, Retail, Energy utility & Services, CPG, and Logistics. Our SAP support services include SAP HANA, SAP Basis, SAP A/BAP, SAP

SAP Testing

Our team of expert testers has deep understanding of SAP modules, testing methodologies and tools like Rational Function Tester (RFT), Quick Test Professional (QTP) and SAP Test Acceleration and Optimization (TAO). The practice includes performance testing, test automation and test data management.

GAMES

With its savvy, skilled and trained team of programmers and game developers, iFocus systemc offers game and control testing, and with the wise use of digital prominence, also contributes in game development in platforms such as Microsoft Xbox, Sony PlayStation and PC.

Testing out the fun – Our games testing experts possess sound knowledge of the platforms like ActiveX and OpenGL which helps them carry out tests with ease on all major gaming platforms such as but not limited to Sony Playstation, Microsoft X360, Kinect and Nintendo gaming platforms. Testing games on Mobile devices is another forte for iFocus.

SERVICE VIRTUALIZATION

- With our dedicated team of engineers, we create and deploy virtual services that simulate the behaviour of real and essential components, to deliver high-quality products to our clients on schedule, cost friendly, and completely error-free.
- With the right use of virtual tools, our services help in weaning off dependences on integrating apps by eliminating constraints, costs and complexity from the process of delivering enterprise software.
- With the behaviour of the dependent peripherals, our virtualized testing and development proceeds without accessing the actual live components.

□ Service virtualization is recognized by vendors, industry analysts, and industry publications as being different than mocking.

BUSINESS PROCESS MODELLING

□ Our expertized business process models help our clients restructure the process and information flow using the standard UML (Unified Modelling Language) and BPMN (Business Process Modelling and Notation).

□ We, at iFocus, also provide visual dash-boarding services which include developing customer dashboards and maintaining them. Our committed dash-boarding services cover areas like Sales, Revenue and Big Data.

□ We are devoted to bridge the gap between business processes that can be read and understood by business analysts, business stakeholders and technical teams. standard UML (Unified Modelling Language) and BPMN (Business Process Modelling and Notation).

□ Our team helps in eradicating all types of ambiguity by providing clear, cohesive, comprehensive and complete services by creating an unambiguous and efficient data flow.
