SOFTWARE PRODUCT DEVELOPMENT

iFocus offers unparalleled and determined product development services to the clients spread across the globe through various delivery models. Our development services range from initial product design to the final testing and deployment. Our innovative approach and expertise on robust frameworks and open sources like MongoDB, ExpressJS, AngularJS and NodeJS, makes us a preferred choice for numerous Fortune 500 companies. Our development methodology comprises rapid prototyping and simulation, which gives clients a preview of the fully functional product.

flexible solution for your business needs

Ideation and Incubation:– We build your unique ideas or concepts into incredible products by driving innovation, performing extensive research, developing, optimizing functions and determining goals.

Customization and Implementation:– Upon ideation, we integrate the ideas and results to provide you an exceptional design that complements your product idea.

Design and Analysis:– On combining product ideas and our delivery capabilities, we develop top-class products in the areas of Healthcare, Security, Media and Entertainment, Transport, Games, and Enterprise Information Management.

Validation and Verification:– Our quality assurance services enhances the reliability and quality of the products, leading to reduced maintenance costs and higher client satisfaction.

Migration and Porting:– We assist our clients in migration and porting of products across various popular platforms, which helps them widen their customer base and market reach.
